#### RHRM MBSE Project - Background

- -- The Resilient Hospital Reference Model (RHRM) Model-Based Systems Engineering (MBSE) project was motivated by work detailed in the booklet, "Resilient Hospital Handbook", authored by INCOSE member Charles Manto; as well as Earl Motzer, PhD; and James Terbush, MD, MPH.
- -- Following its publication, in a series of subsequent discussions, it was decided that follow-up systems engineering work could provide added value, based on "model-based" contributions from several INCOSE working groups, IEEE, and FBI/InfraGard, in collaboration with key stakeholders from SDMPH, NACCHO, and other healthcare organizations.
- -- The RHRM MBSE project has been underway since 2018; building on 2017 initial efforts of a "Microgrid Reference Model" MBSE project.
- -- As work continues on the Microgrid Reference Model MBSE project, the work of the RHRM MBSE project has garnered significant interest from several healthcare-related organizations.

#### Project Purpose, Goal, and Vision

**Project Purpose:** To develop a *generic* **Resilient Hospital Reference Model (RHRM)** to enhance current planning for preparedness, protection, prevention, response, mitigation, and recovery; initially as they pertain to <u>hospital prolonged power outages</u>.

**Project Goal:** To provide all hospitals with a **Resilient Hospital decision support capability** (leveraging Model-Based Systems Engineering (MBSE) techniques and tools) that hospitals can use to enhance planning before, during, and after a prolonged power outage.

**Project Vision:** This Resilient Hospital decision support capability can be **replicated and scaled**; to offer the same kinds of model-based tools and resources at the public health care local, tribal, state, regional, and national levels.

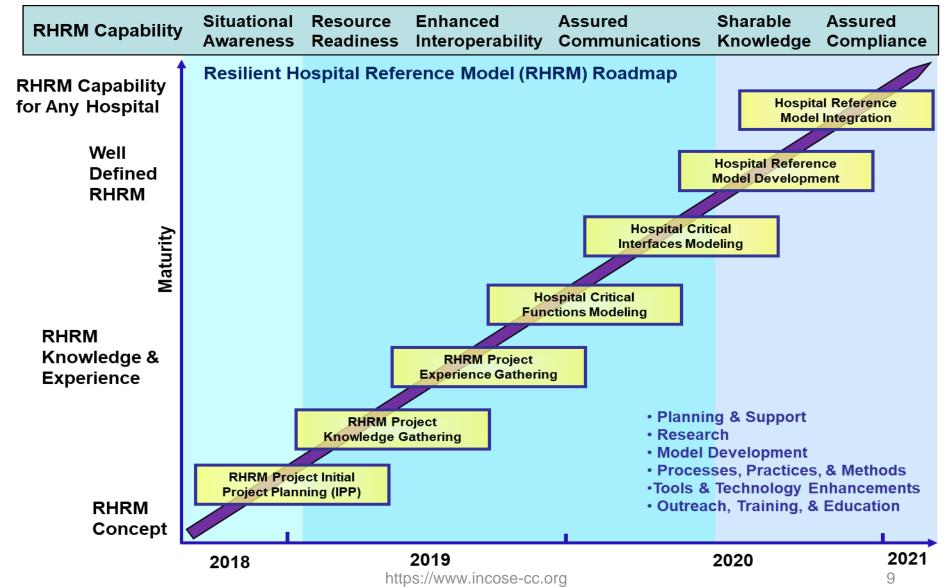

#### Resilient Hospital Reference Models

- -- Enable hospitals in general to:
  - Collaboratively model (i.e., describe and diagram, in a common repository) and share reference data and information about hospital critical operations.
  - Establish a common reference framework.
  - Effectively and efficiently coordinate the provision of resources and services.
- -- Will enable planning and decision-making in compliance with all local, tribal, state, regional, and national guidance, requirements, and standards (i.e., references).
- -- Meant to be flexible & scalable, to enable hospitals to successfully integrate their operational references into broader health care coalition catastrophic event planning, execution, and evaluation frameworks, as well as national emergency healthcare response systems.

#### RHRM MBSE Project - Events

- -- Three LSM/Agile RHRM MBSE Initial Project Planning (IPP) Workshops at JHU/APL **Apr-Oct 2018**.
  - INCOSE, IEEE, FBI/InfraGard, SDMPH, NACCHO, other Healthcare Leaders
- -- 2018 and 2019 Project Presentations/Tutorials:

INCOSE Chesapeake Chapter - Feb 2018

NASA Goddard - Mar 2018

GLRC 2018 - Oct 2018

EnergyTech 2018 - Oct 2018

INCOSE HWGSEC 2019 - May 2019

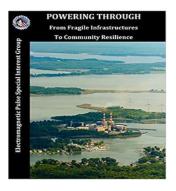

EnergyTech 2019/GLRC 2019 - Oct 2019

- -- Paper presented at SDMPH Meeting in Puerto Rico Feb 2019
- -- Project Team Member at SDMPH National Meeting Aug 2019
- -- Project Orientation and Other Sessions at INCOSE IW20 Jan 2020
- -- Project Briefing at Colorado South Central Healthcare Coalition Jan 2020
- -- Project Status Briefing to the INCOSE Requirements Working Group Apr 2020
- -- Project Status Briefing to the INCOSE Chesapeake Chapter Jun 2020
- -- Attending two upcoming virtual NACCHO Conferences Jul and Aug 2020
- -- Proposed Briefing and Tutorial at INCOSE GLRC14 in Detroit, MI Sep 2020
- -- On the schedule for INCOSE HWGSEC 2020 in MSP, MN Oct 2020
